

Civil Liberties in the Age of Face Recognition

Guest Speaker:
Clare Garvie

Georgetown Law / Center on Privacy and Technology

This talk will explore the unique risks that face recognition use by police poses to our constitutional rights and liberties, with a focus on the rights of the accused in criminal trials. Using the FOIA research that the Center on Privacy & Technology has done in this space, it will outline how the technology is currently used, as well as likely future deployments in the United States in the absence of proactive legislative action. It will also review the efforts underway in communities across the country to regulate or ban its use, as well as historical and recent court decisions that can help inform what legal protections exist vis-a-vis face recognition and related surveillance technologies.

Tuesday, 25 February 2020
11:00 am – 12:00 noon
